**EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended (in accordance with the specification) as follows:

claim 56, line 10, --first-- has been inserted before "phase retardation";

claim 58, line 10, --first-- has been inserted before "phase retardation".

**REASONS FOR ALLOWANCE**

2. Claims 56,<sup>58</sup>~~57~~ are allowed.

The following is an examiner's statement of reasons for allowance: the prior art of record does not anticipate nor render obvious to one ordinary skilled in the art a broad-band liquid crystal linear polarizer comprising a combination of various elements as claimed, more specifically, the amount of phase shift imparted by the first phase retardation structure as central wavelength  $\lambda_c$  is  $\pi/2$  radians, the amount of phase shift imparted by the second phase shift imparted by the second phase retardation structure at central wavelength is  $\pi/2$  radians, the cholesterically ordered molecules throughout the bulk of the single film structure have a LHC ordering, and incident light is produced from an unpolarized light source located on either side of the broad-band liquid crystal polarizer.

Ma ('454) discloses a cholesteric LCD employing circular polarizer and Sharp ('666) discloses a liquid crystal phase modulator using cholesteric circular polarizers. However, neither reference discloses a broad-band liquid crystal linear polarizer comprising a combination of various elements as claimed, more specifically, the amount of phase shift imparted by the first phase retardation structure as central wavelength  $\lambda_c$  is  $\pi/2$  radians, the amount of phase shift imparted by the second phase shift imparted by the second phase retardation structure at central wavelength is  $\pi/2$  radians, the cholesterically ordered molecules throughout the bulk of the single film structure have a LHC ordering, and incident light is produced from an unpolarized light source located on either side of the broad-band liquid crystal polarizer.

Art Unit: 2871

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
